Genetic research and hybrid development are at the core of AgriGold’s success. As a division of AgReliant Genetics, AgriGold has access to unique genetics and a global research and testing network; AgReliant Genetics’ corn breeders develop and pair our very best inbreds to handle nearly any condition you might face.

With every bag of AgriGold seed, you plant the knowledge and experience of a top corn research program working towards your success.

GLOBAL RESEARCH LOCATIONS

Locations shown represent the research network of AgReliant Genetics and its parent companies KWS and Groupe Limagrain.
Powered by AgReliant Genetics, our pre-commercial research system includes 480 trials spanning more than 200 unique locations across the U.S. This gives AgriGold Representatives the knowledge to provide a complete understanding of our products’ genetic and trait performance in addition to how each hybrid performs locally to address your particular challenges and meet your exact needs.

Since launching this enhanced method of commercial corn research in 2017, AgReliant Genetics tested double the amount of new hybrids than with our previous pre-commercial testing approach in addition to realizing a huge increase in the number of planned trials planted and usable trial data collected. This system reduces variables, increases accuracy and gives us an even more authentic pulse on short and long-term market needs to continue developing industry-leading hybrids.

See for yourself. Ask your AgriGold Representative to show you the latest and greatest in our genetics at a commercial testing site near you.
