Genetic diversity minimizes risk

Every season presents unique growing conditions and environments. Utilizing genetic diversity with our Field GX families can minimize risk and bring greater yields.

Our research teams have developed one of the most diverse hybrid lineups in the industry.

**FIELD GX ATTRIBUTES**

- **FIELD GX A**
  - Excellent plant health
  - Prefers early applications of nitrogen
  - Has high requirements for potassium
  - Handles well or poorly drained soils
  - Best in a cooler year

- **FIELD GX B**
  - Strong emergence & vigor
  - Prefers split applications of nitrogen
  - Extremely high-yielding capabilities in well-drained soils
  - Strong plant health & average late-season stalk strength
  - Flexible ear types

- **FIELD GX F**
  - Prefers split applications of nitrogen
  - Excellent test weight & grain quality
  - Adapts to wide range of soil types
  - Generally fixed to semiflexible ear types
  - Higher populations required for maximum yields

- **FIELD GX G**
  - Responds to late applications of nitrogen
  - Excellent plant health & drought tolerance
  - Excellent test weight & grain quality
  - Flexible ear types
  - Adapts to variable soil types

- **FIELD GX H**
  - Top-end yield consistency
  - Performs well at high plant populations
  - Handles multiple soil types
  - Very good grain quality & test weight
  - Excellent southern movement

*Individual results may vary, and performance may vary from location to location and from year to year. This result may not be an indicator of results you may obtain as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible.*

*Characteristics are assigned by AgriGold based on comparisons with other AgriGold products (not competitive products) through in-house field testing.*
